Negative Pressure Drainage Catheter for single-use ▶▶▶

providing products to help improve patient safety and comfort is at the heart of what we do. For years, our quality and clinically designed wound drains have been supported with best practice guidance to help ensure that clinicians feel comfortable and ultimately more confident in what they do.

our wound drain line, trusted amongst that clinical community since 2011, represents our long-standing experience in the industry. you will find comfort in knowing that we provide a full assortment of wound drains and drainage systems, ensuring that wound drain portfolio will effectively meet the needs of a variety of situations and procedures.

Negative Pressure Drainage Catheter for single-use ▶▶▶

Spiral Drains

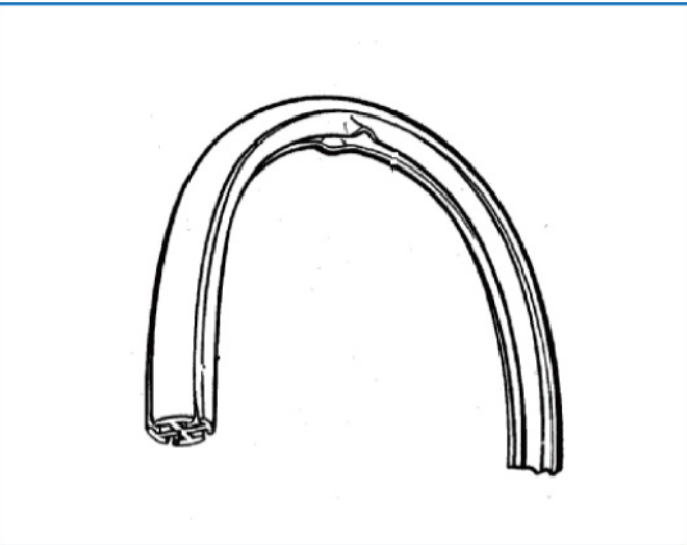

- Drains also when subject to tractions or unusual positioning.
- Spiral design offers alternative drainage routes to eliminate blocking from blood clots.
- High efficiency allowing use of a smaller size than a standard perforated drain
- Easy X-ray identification by effect of total radiopaque profile

Negative Pressure Drainage Catheter for single-use ▶▶▶

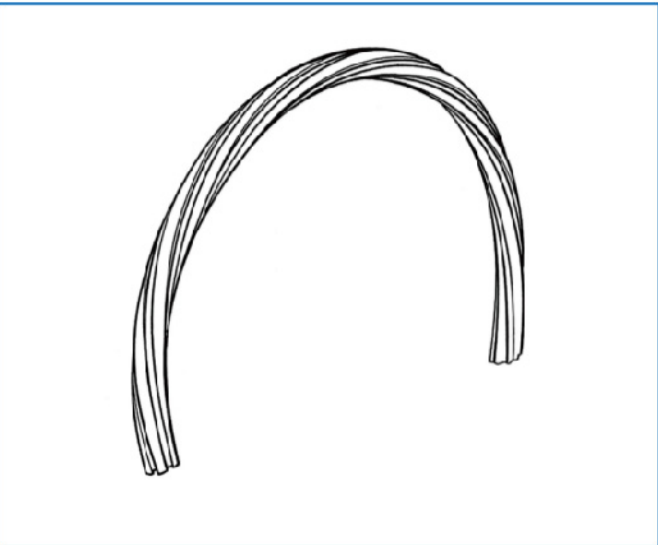

Spiral Drains are available in a variety of sizes and styles, both with and without negative pressure ball and drainage bag

Why is better ?

Standard fluted drains tend to expand channels when curved generating a loss of capillarity.

Spiral Drain remains active even if bended

Negative Pressure Drainage Catheter for single-use ▶▶▶

Negative Pressure Drainage Catheter for single-use ▶▶▶

Fluted Drains

- A four-channel design
- Designed to help assist in minimizing tissue in growth-through a no-hole design
- Reduces the risk of adhesion in body tissue making them easier to remove after patient recovery.
- Easy X-ray identification by effect of total radiopaque profile

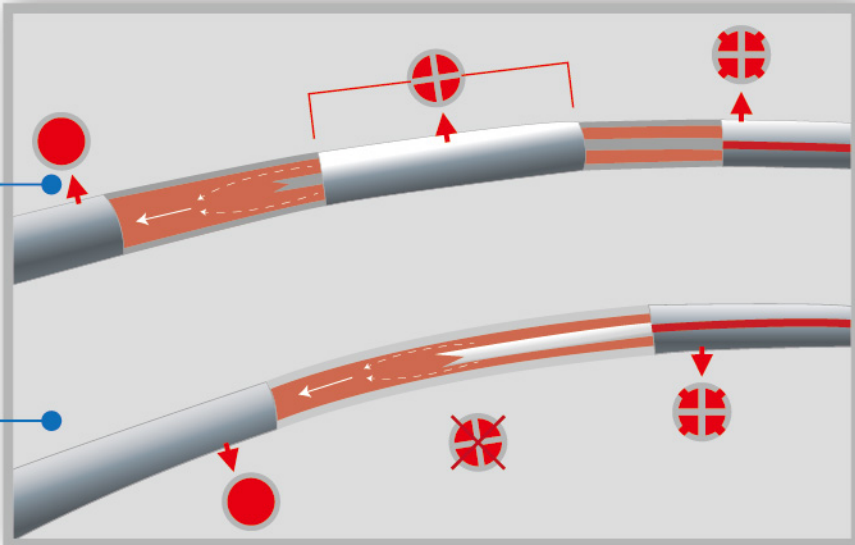

Fluted Drains are available in a variety of sizes and styles, both with and without neagtive pressure ball and drainage bag

Why is better ?

Using CONVENTIONAL hubless fluted drains, fluids transfer from fluted profile to round profile is not immediate, therefore the flow offluids is reduced and risks of occlusion increased

Fluted Drain, thanks to Yangtze River's extrusion technology, has ajunctionless structure which allows direct transfer of fluids from fluted to round profile.

Negative Pressure Drainage Catheter for single-use ▶▶▶

Flat Fluted Drains

- Flat fluted drains are differentiated by a single extrusion profile, unique on the market.
- Channel drain offers important advantages over conventional perforated drains by capillary effect.
- Flat four channels shape allows for greater multi-channel drainage, radiopaque for easy X-ray visualization.

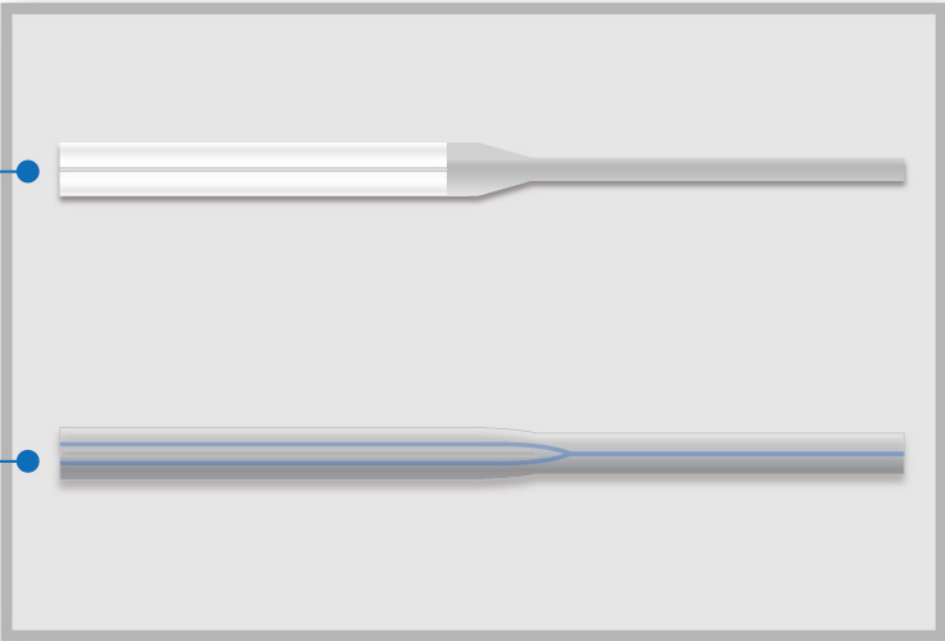

Negative Pressure Drainage Catheter for single-use ▶▶▶

Flat Fluted Drains are available in a variety of sizes and styles, they are often referred to as classic drains

Why is better ?

Traditional design

Single extrusion profile ensures efficient drainage speed without transition passage from fluted segment to the round profile.

Negative Pressure Drainage Catheter for single-use ▶▶▶

Flat Perforated Drains

- Misaligned holes allowing for a better drainage and reducing the risk of clotting.
- Inner ribbing in flat tube reduces risk of clogging and collapsing.
- Internal grooves maintains drain patency and permits continuous suction with flat profile.

Negative Pressure Drainage Catheter for single-use ▶▶▶

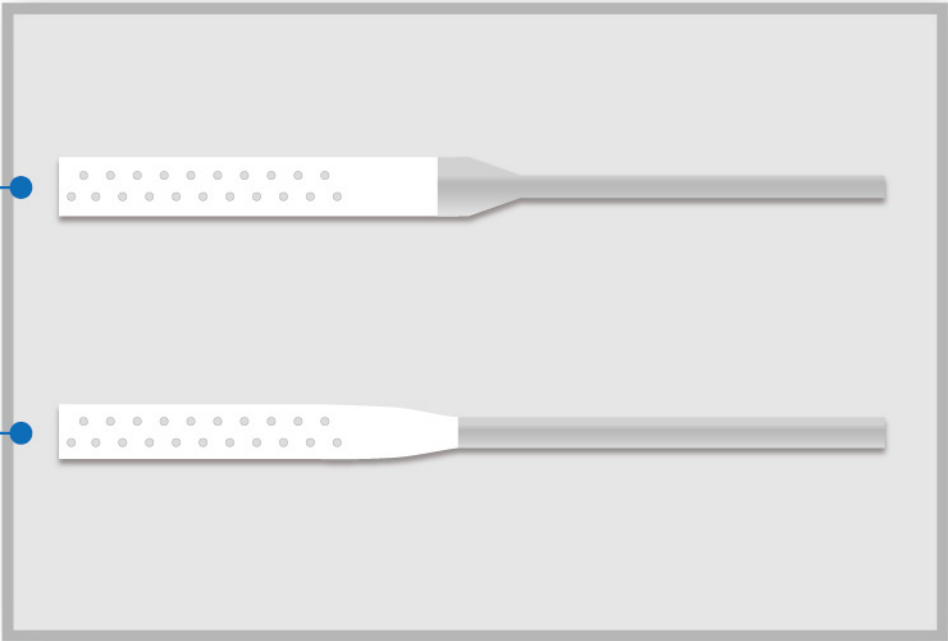

Flat Perforated Drains are available in a variety of sizes and styles, they are often referred to as classic drains

Why is better ?

Traditional design

No pain for removing the tube after patient recovery, with the smooth transition from drainage segment to the round profile.

Negative Pressure Drainage Catheter for single-use ▶▶▶

Perforated Drains

- Perforated round drains are one-piece design and hubless
- Misaligned holes allowing for a better drainage and reducing the risk of clotting
- Perforated round drains feature a radiopaque stripe running the entire length of the drain for X-ray detection

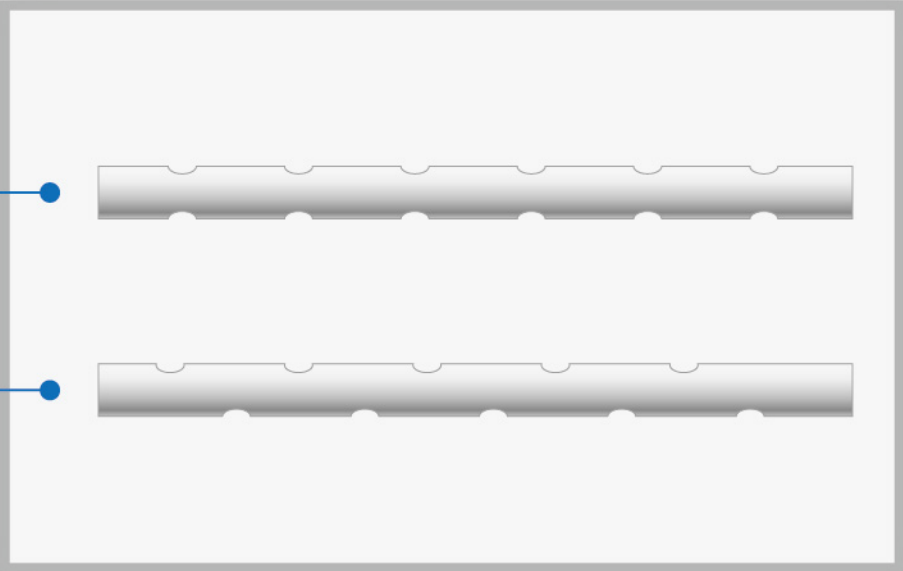

Negative Pressure Drainage Catheter for single-use ▶▶▶

Perforated Drains are available in a variety of sizes and styles, they are often referred to as classic drains

Why is better ?

Aligned holes has a poor drainage performance and the risk of obstruction

Misaligned holes allowing for a better drainage and reducing the risk of clotting

Negative Pressure Drainage Catheter for single-use ▶▶▶

Negative pressure ball is available for use with all wound drains or in convenient kits.

Negative pressure Ball and Accessories

- Silicone walls to provide easy activation of suction
- Internal anti-reflux valve to help prevent backflow of fluid
- Clear reservoir and graduations that make it easy to identify and measure exudate
- Not made with natural rubber latex

Why is better?

NO need for a constant patient monitoring:

even if the bulb is full the fluid keep going into the drainage bag allowing a continuous wound drainage.

NO biological hazards:

nurses do not need to empty the drainage bag, exposing themselves to biological infections, they just need to change the drainage bag and activate the bulb evacuator.
